

Your unique mobile office solution exclusively from ITS Telecom

The mobile office, whilst not a new concept in itself, has only recently been able to exploit the feature rich opportunities that both IP and cellular technologies offer.

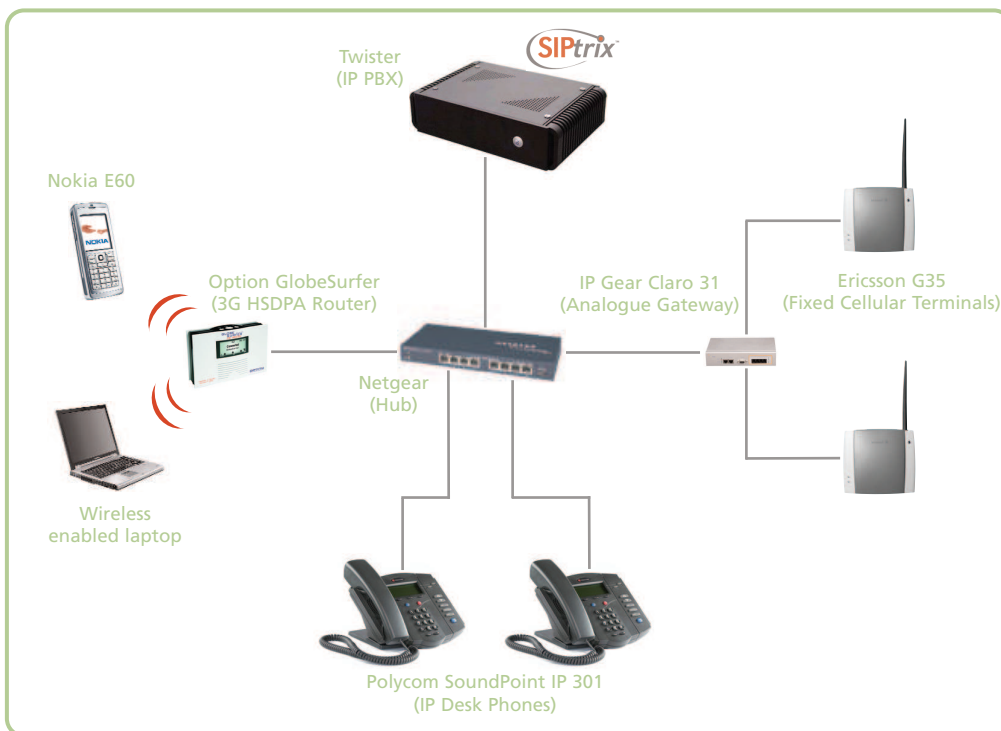

By ITS Telecom aggregating both technologies, you now have a modular system that provides all you would expect from your fixed office environment, but without the costs or time associated with creating the infrastructure.

Organisations that need to move offices or set up temporary ones, such as construction sites, tend to incur heavy costs for the installation of data and phone lines. It is not unusual to wait up to 3 months for lines to be installed by BT.

We have merged IP products (including an IP PBX, GSM/IP phone and gateway) with a 3G router and Fixed Cellular Terminals (FCTs) to produce a wireless mobile office and data system.

The solution is housed within a ruggedised photography case for easy transportation and may be used anywhere there is mobile coverage.

An example mobile office set up available through ITS Telecom is detailed below.

Mobile office benefits:

- > No delays awaiting a BT install
- > No installation costs
- > Reduced cabling costs
- > Increased flexibility
- > Modular system
- > Feature rich IP PBX

Ideal solution for:

- > Construction
- > Temporary offices
- > Serviced office providers
- > Exhibition organisers
- > Auditors
- > Mobile manufacturing plants
- > Temporary retail outlets
- > Mobile events

Wherever there is the need for fixed office communications in a remote environment, this solution is ideal.
